

# THE LOST CHILDREN OF BABYLON – THE PYTHAGOREAN THEORUM

## LYRICS

[rasul allah 7]

a square plus b square equals c square i bring forth the basic equation of any hypotenuse of a right angle, triangle  
minus c cube square, on both sides i am the "i" within the triangle, i restate my -ssumptions  
"mathematics is the language  
of the universe, everything around us can be over stood, if you graph the numbers of any system or pattern emerged  
geometrically there are patterns everywhere in nature, i began to search for the sacred code of 9/5 and the way from 0.3 .14 .15 92 65 35 equals the multiples of pie, the numerical value that adds up from 0 to 9 this is the exact number of pie carried out through 9 divided by 10 carried through 30 and 2 there is no human or mathematician who has been able to figure how to calculate the basic decimal point of the equation of 9, to 9th power of 9 or diameter of the circle divided into the circumference of a square! its supreme mathematics that appears here, so i dare all mc's to come near- remember pythagoras and where he got his equation from, while standing in front of the sarcophaguses within the kings chamber! in the base of the great pyramid in ancient tamu re the pythagoreans mathematicians code the first of them was born in athens greece in 500 b.c.e.... his major belief is that the universe is made of numbers, his major contribution in life the golden ratio, leonardo da vinci rediscovered the balance perfection rectangle and chiseled it into his masterpiece, and connecting a curve through the concentric you create the golden spiral! pythagoras loved the shape for he found everything in nature from seashells to whirlpools, our fingerprints, our dna, even our milky way; you see mathematics appears everywhere when measuring distinct galaxies! ...

we have mastered mathematical reasoning that's between 1, 2 and 3 and have travelled 3, 5, and 7 and now we hold the ark that is the key to the pythagorean that's between 1 and 9  
we have mastered mathematical reasoning that's between 1, 2 and 3 and have travelled 3, 5, and 7 and now we hold the ark that is the key to the pythagorean that's between 1 and 9

[sol robeson]

you're connecting a computer bug i had with a computer bug you might have had and some religious hogwash. you want to find the number 216 in the world; you will be able to find it everywhere. 216 steps from a mere street corner to your front door. 216 seconds you spend riding on the elevator. when your mind becomes obsessed with anything, you will filter everything else out and find that thing everywhere

[rasul allah 7]

in the magnificent world of arithmetic which is mystical equation of 9 to the 9th power of 9, the number 9 is it pi? 3 9 and 5 are defined in a sequence of integers that define right angledness within the triangular measurement we began to start counting from 1, 2,3,4,5,6,7,8 but where is

the number 9? seen at least

in the rhyme before 0 slips in so we began to start counting again, is the number 9 the last stop?  
where does it began and end, yet its stepping stones to 5 and 4 and they seem to have special  
numerical system to them. 3 and 6 play with pefection and 9 is also 3 times 3 multiplying the  
plenary code of 12 times 12 from 3 sets of 3 and the results will be 216 digits off into infinity, so  
if you divide 144,000 into 233 the answer will be d?4??4??1? the key to understanding the  
golden spiral, 9 is also twice plus 4 before its equal to 2 plus 2, so perhaps deep down in the tho-  
rax i subdue you, and all those who do not mathematically have a clue

we have mastered mathematical reasoning that's between 1, 2 and 3 and have travelled 3, 5,  
and 7 and now we hold the ark that is the key to the pythagorean that's between 1 and 9  
we have mastered mathematical reasoning that's between 1, 2 and 3 and have travelled 3, 5,  
and 7 and now we hold the ark that is the key to the pythagorean that's between 1 and 9

[sol robeson]

i'm sure you've written down every 216-digit number  
you've translated all of them  
you've intoned them all. haven't you?  
what's it gotten you? the number is nothing
